Victorian Flowers & Vegetables

All of the plants growing in the Victorian Walled Garden are old "Victorian" varieties. These are varieties introduced to Ireland before 1901. Many of the plants are rare and some varieties are unavailable commercially today. The gardeners at Kylemore Abbey work to preserve these heritage and heirloom varieties through seed saving and plant propagation. Thanks to their work, these wonderful Victorian varieties are here for you to enjoy.

Our Head Gardener sources Victorian varieties of seeds every year for the Walled Garden. A selection of these Victorian seeds are available to purchase at the Kylemore Abbey Craft & Design Shop and on our online shop. You can help preserve these old varieties of flowers and vegetables by planting them in your own garden.

Keep in touch with our garden news.

Follow what's happening in the Victorian Walled Garden, see beautiful photographs and learn some tips for your own garden in our monthly Head Gardener's Diary.

Centaurea Macrophylla

The Herbaceous Border Plant Catalogue

The Herbaceous Border

The Herbaceous Border consists of a north and a south border running either side of the main garden avenue. The plants are planted on a grid system.

There are four rows of plants, with the lowest at the front, row A and the tallest at the back, row D. The rows are divided into columns.

The north border has 83 columns numbered along the front row. Column 1 is situated near the bridge to the east with column 83 situated near the west gate.

Most plants are grown on both sides of the border. This plant catalogue is an example of the variety of herbaceous plants which grow in the north border.

To identify a plant growing in the north border follow these steps:

- Step 1: Check the column, e.g. number 5
- Step 2: Determine the row, e.g. row B
- Step 3: Look up the plant name in the list
- Step 4: North border 5B = *Astrantia major*
